SUMMARY

Full-stack developer building real-time web and mobile apps in React, React Native and TypeScript, on PostgreSQL, MongoDB and Node back ends. I care about the parts users feel: actions that respond instantly on weak networks, data that updates live, and forms that explain themselves. I back that with tests and CI, and use AI-assisted development with every diff read and every change tested by me.

SKILLS

Front end: React 18, TypeScript (strict), React Router, Tailwind CSS, DaisyUI, Recharts, HTML/CSS

Mobile: React Native (Expo Router), Flutter, SwiftUI/WidgetKit; mobile-first and low-bandwidth design

Back end & data: Node.js (Meteor), Supabase (PostgreSQL, PostGIS, Auth), MongoDB, Django, Flask

Real-time: WebSockets (Meteor pub/sub, Supabase Realtime, a hand-written relay), optimistic UI, IndexedDB

Testing & delivery: Mocha/Chai, node:test, unittest, GitHub Actions, Docker, Cloud Run, Cloud Build

AI-assisted development: Claude Code, Claude Design, Copilot, custom Claude Skills; I review every change

Ways of working: Agile/Scrum, pair programming, design systems, technical docs, root-cause analysis

SOFTWARE PROJECTS

Pa-Ride (Carpool Marketplace)

Aug 2026 – Present

React Native (Expo Router) · TypeScript (strict) · Supabase (PostgreSQL, PostGIS, Realtime) · Claude Code

- Researched how Filipinos already carpool in Facebook groups before writing the spec and schema
- Built PostGIS corridor matching so riders find drivers already passing near their route
- Made seat booking row-locked Postgres functions behind row-level security, so trips can't be overbooked
- Built shareable trip cards and public trip pages so drivers' Facebook posts pull new users into the app
- Wrote a Claude Skill that checks new UI code against the app's design-system docs before it's done

Realtime Queue Management System

Jan 2026 – Present

React 18 · TypeScript · Tailwind/DaisyUI · Meteor · MongoDB · Mocha/Chai · GitHub Actions · Docker · Cloud Run

- Built no-account joining by QR code, with a server-issued token so no one can tamper with another's entry
- Made actions feel instant on weak mobile networks with optimistic UI that rolls back on failure
- Built a live-formatting phone input that shows the expected format and blocks submission until valid
- Fixed membership changes needing a reload with a reactive-join helper, removing three workarounds
- Traced a slow, staggered list load to an N+1 pattern (about three subscriptions per row); replaced it with one batched subscription plus indexes where loads had been full collection scans
- Merged three drifting copies of the wait-time maths into one, fixing wrong estimates and a data leak
- Ran an accessibility pass on all 17 modals: focus trap, Escape to close and focus restore, via one hook
- Grew the suite to 900+ unit and integration tests, run in GitHub Actions on pull requests into the release branch; each release auto-deploys to Cloud Run
- Built the foundations by hand from Jan; since Aug I use Claude Code and review every change

Sim Racing Telemetry Dashboard (Gran Turismo 7)

Sep 2026

JavaScript · Canvas/SVG · WebSockets · IndexedDB · Python · node:test / unittest · Claude Code / Claude Design

- Built a GT7 dashboard: a Python bridge relays the PS4's UDP telemetry to the browser over WebSockets
- Designed an iPad-first, customisable grid: 14 widgets with drag, resize, presets and a phone layout
- Traced lap times drifting from the game's own to frames timestamped on arrival over jittery Wi-Fi; switching to the game's clock cut lap-time error from 384 ms to 9 ms
- Measured each network hop to find the console's Wi-Fi stalling about 100 ms twice a second, and added a tunable jitter buffer that removed the visible stutter
- Wrote 166 automated tests, including replays of real recorded sessions and a regression test per bug fix

Portfolio Site

Aug 2026 – Present

Python static site generator · HTML/CSS/JavaScript · Pages CMS · GitHub Actions · Claude Code / Claude Design

- Built the Lab as a home for live demos, with each tool kept in its own repo and pulled in at build time

- Built a light/dark theme with no flash on load; darkened the accent from below 4.5:1 contrast to 5.1:1
- Set up a Git-based CMS so content and resumes can be edited in a browser, live in about a minute

Melbourne Public Transport Widget

Mar – Dec 2025

Flutter · SwiftUI/WidgetKit · Drift/SQLite · Python (Flask) · GTFS Realtime

- With a partner, built a Flutter app and iOS home-screen widget with live departures for saved routes
- Designed a 14-table SQLite cache so the app calls the PTV and GTFS APIs only on a cache miss

C-LARA Image Annotation Tool (University Capstone)

Aug – Nov 2023

Python · Django REST Framework · React · Agile/Scrum

- Product Owner for a 5-person Scrum team; built the Django REST API (11 endpoints, 37 tests); graded H1
- Co-built a React canvas tool that stitches pen strokes into one polygon, pixel-accurate at any zoom

Earlier projects, built without AI

2021 – 2022

- Space Golf: procedural planet generation and Unity Editor tooling for a 4-person C#/Unity game
- COVID-19 Air Quality: joined four public datasets in a Python/Pandas pipeline to test a hypothesis

WORK EXPERIENCE

Freelance QA Tester | UK ETA Visa Services (iOS), via Upwork

May 2026

- Tested the full visa flow end to end instead of the brief's 10 to 15 minute pass, tracing how inputs affected later screens; earned a 5-star review

Ad-hoc Programmer | NutTAG Australia

Dec 2023 – Jan 2024

- Got up to speed on a product NutTAG had just inherited, helping the team understand it
- Redesigned the support chatbot's flow and knowledge base to target complaints in NutTAG's reviews

COMMUNITY

Australian Computer Society | member and event volunteer, 30+ CPD hours logged in 2026 2025 – Present

Google Developer Group Melbourne | attendee

2024 – Present

EDUCATION

BSc Computing & Software Systems | University of Melbourne

2023

International Baccalaureate Diploma | German-European School Manila

2018
